Illustration of CPR ratcheting mechanism in the steel sector

[kgCO$_2$e/ton hot rolled steel]

Illustrative limit values

2030
2035
2040
2045
2050

Scrap share of metallics input [%]

- Emissions performance G
- Emissions performance F
- Low emissions E
- Low emissions D
- Low emissions C
- Low emissions B
- Low emissions A
- Near zero emissions
- Net zero (<= 0 kgCO$_2$e/t)
- Limit values placed by product carbon requirements for different time periods
